

What If You Could...

**Turn your computers
into interactive
response systems and
assessment tools?**

You Can!

eInstruction™ is revolutionizing interactive learning by pairing our award-winning student response system and assessment software with any computer.

With vClicker you can turn any computer into an interactive response device

Students can use their computers to anonymously answer questions during instruction, for real-time formative assessment.

With vClicker, students can also participate in interactive team challenge activities.

All student assessment data is captured by vClicker software and is organized into customizable standards-based reports that are immediately viewable on the teacher's computer.

The Foundation of an Interactive Learning Environment – Student Engagement

Learning doesn't take place if students are not engaged and motivated to learn. Research by William Sanders (Sanders, 1999) in support of the Tennessee Department of Education has identified the most important aspect of academic progress is the teacher. With vClicker, computers become a major teacher and assessment tool that:

- Enables the teacher to positively and simply engage all students in the class at any point in the instructional process
- Provides both immediate and delayed feedback to the teacher and/or the students in the class
- Reduces the cost to the teacher of analyzing short-term and long-term results of classroom interactivity
- Supports the repetition of core learning concepts

Sanders, William F. (1999). Teachers, Teachers, Teachers. Blueprint Magazine.
